DOCUMENT VERSION CONTROL RECORD

Version Number	Effective Date of Release	Summary of Included Changes	Author
7.0	8 June 2026	Legacy Adobe XD lesson plan.	Tertiary Infotech Academy Pte Ltd
8.0	23 August 2026	Rebuilt for Claude Design; aligned to 150-slide deck, eight labs and preserved WA/PP timings.	Dr Alfred Ang

Course Overview

This one-day course develops principle-led UI design capability using Claude Design. Learners move from evidence and information flow to design systems, components, interactive prototypes, evaluation, documentation and handoff.

Course Title	Claude Design for UX/UI
Course Code	C744
Duration	1 day · 9:30 AM – 5:30 PM (7.5 instructional hours)
Trainer	Dr Alfred Ang

Learning Outcomes

- LO1: Identify user needs, required functionality and information flows for an interface.
- LO2: Develop reusable interface components and states with Claude Design.
- LO3: Design, prototype and evaluate a responsive graphical user interface against defined metrics.
- LO4: Document design decisions, manage revisions, export deliverables and craft user guidance.

Daily Schedule

Course Schedule · One Day (9:30 AM – 5:30 PM)

Time	Duration	Topic / Activity	Method	Slides
09:30–10:30	60 min	Welcome, outcomes; Module 1 — requirements, research and information flow	Admin + concept	11–45
10:30–11:20	50 min	Labs 1–2 — Research Brief; Information Flow and Principle Audit	Hands-on	38–43
11:20–12:15	55 min	Module 2 — Claude Design workflow and design systems	Concept + demo	46–78
12:15–13:05	50 min	Labs 3–4 — Design System Project; Prompted Wireframes and Variants	Hands-on	71–76
13:05–13:35	30 min	Lunch	Break	—
13:35–14:30	55 min	Module 3 — components, states and interaction	Concept + cases	85–117

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Time	Duration	Topic / Activity	Method	Slides
14:30–15:20	50 min	Labs 5–6 — Reusable Components and States; Responsive Prototype	Hands-on	110–115
15:20–16:20	60 min	Module 4 — evaluation, documentation and handoff	Concept + demo	118–142
16:20–16:45	25 min	Lab 7 — Usability and Accessibility Evaluation	Hands-on	135–137
16:45–17:10	25 min	Lab 8 — Documentation, Export and Handoff	Hands-on	138–140
17:10–17:30	20 min	Course recap, Q&A and next steps	Recap	—

Day total: 450 minutes (7.5 instructional hours), 9:30 AM – 5:30 PM, excluding a 30-minute lunch.

Topic-by-Topic Facilitation Guide

Module 1 — Requirements and Principle-Led UI Design · Slides 11–45

From user needs and information flow to defensible interface decisions

Alignment: LO1 · K1 · K3 · A1 · A2

- UI and UX: different lenses, one outcome
- User-centricity begins with a job
- Design thinking with AI support
- Research evidence: signal before synthesis
- Personas, segments and jobs-to-be-done
- Information architecture: organise for recognition
- User flows expose hidden interface states
- Clarity: make purpose and next action obvious
- Visual hierarchy: design the reading order
- Consistency and familiarity build prediction
- Simplicity and progressive disclosure
- Accessibility is a design input
- Feedback, error prevention and user control

Lab 1 — Research Brief and Requirements · Slides 38–40

Purpose: A neighbourhood wellness service needs a mobile experience for daily support and appointment booking. Output: research-backed product brief, required-function list and measurable success criteria. Duration: 45 minutes. Evidence: Names a primary user and job, Separates evidence from assumptions, Lists essential functions, Defines observable success.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

Lab 2 — Information Flow and Principle Audit · Slides 41–43

Purpose: Map the wellness appointment task and inspect a flawed flow against clarity, hierarchy, consistency, accessibility and feedback. Output: complete user flow with exception states and a prioritised UI audit. Duration: 60 minutes. Evidence: Flow includes success and recovery, Every issue names a principle, Severity connects to task impact, Recommendations are testable.

Module 2 — Claude Design Workflow and Design Systems · Slides 46–78

Context-rich prompting, systematic exploration and controlled refinement

Alignment: LO2 · K2 · K3 · A3

- What Claude Design is—and is not
- Access, interface and beta boundaries
- A project is a context boundary
- Import a design system before generating
- Prompt anatomy for interface work
- Direction without AI design slop
- Move from structure to fidelity
- Variants are hypotheses, not wallpaper
- Choose the right refinement channel
- Versions turn iteration into evidence
- Responsive design is a set of priorities
- Tokens and components create a shared language

Lab 3 — Claude Design Project and Design System · Slides 71–73

Purpose: Create a Claude Design project and provide a compact design-system contract for the wellness product. Output: project context pack with tokens, component rules and explicit design direction. Duration: 45 minutes. Evidence: Uses named tokens, Defines component variants, Includes accessibility rules, Test screen matches the system.

Lab 4 — Prompted Wireframes and Variants · Slides 74–76

Purpose: Generate a four-screen wellness booking flow, then compare two structurally different directions. Output: low-fidelity responsive wireframes and a documented variant decision. Duration: 45 minutes. Evidence: All required screens appear, Real content replaces lorem ipsum, Variants differ structurally, Selection cites criteria.

Module 3 — Components, Prototypes and Evidence-Based Evaluation · Slides 85–117

Design realistic states, validate behaviour and iterate from observable results

Alignment: LO2 · LO3 · K2 · A3 · A4 · A5

- Component anatomy defines responsibility
- States are part of the component
- Interaction design makes cause and effect visible
- Navigation should match the information model
- Forms are conversations with constraints
- Feedback and microcopy close the loop
- Prototype the riskiest behaviour
- Define usability metrics before testing

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- Heuristic review is a structured expert lens
- Accessibility review across the state matrix
- User testing observes behaviour, not performance
- Iteration needs a change hypothesis

Lab 5 — Reusable Components and States · Slides 110–112

Purpose: Turn the selected wireframe into a component system with accessible buttons, fields, cards and navigation. Output: component sheet and coded reference with default, focus, loading, disabled and error states. Duration: 45 minutes. Evidence: Components use tokens, Focus is visible, Loading/error states are distinct, Reuse does not create drift.

Lab 6 — Interactive Responsive Prototype · Slides 113–115

Purpose: Build and connect the high-fidelity wellness flow across desktop and mobile widths. Output: interactive prototype covering booking success, conflict and recovery. Duration: 45 minutes. Evidence: Primary task is complete, Conflict state preserves progress, Mobile layout adapts, All actions provide feedback.

Module 4 — Documentation, Collaboration and Handoff · Slides 118–142

Keep design intent, decisions and deliverables usable beyond the canvas

Alignment: LO4 · A6 · A7

- Collaboration needs permission clarity
- Choose export by downstream job
- Claude Design and Claude Code handoff
- A decision log explains why the UI changed
- User guides are task support, not feature inventory
- Case study: community wellness mobile flow
- Case study: sustainable retail operations
- Governance protects design quality at scale

Lab 7 — Usability and Accessibility Evaluation · Slides 135–137

Purpose: Evaluate the prototype with a realistic task, heuristic review and accessibility checks, then perform one evidence-led iteration. Output: test record, prioritised findings and before/after design checkpoint. Duration: 45 minutes. Evidence: Metrics defined before testing, Findings cite evidence, Accessibility covers states, Retest uses the same task.

Lab 8 — Documentation, Export and Handoff · Slides 138–140

Purpose: Prepare the final prototype for stakeholder review, developer handoff and end-user guidance. Output: versioned export bundle, decision log, handoff brief and task-based user guide. Duration: 30 minutes. Evidence: Change log explains rationale, Export matches downstream need, Guide supports a real task, Handoff includes states and acceptance.

Resources Required

- Current browser, local text editor and permission to open local HTML files.
- Eligible Claude account with Claude Design access; Enterprise enablement where required.
- Current course slides, Learner Guide and the complete labs folder.

© 2026 Tertiary Infotech Academy Pte Ltd. All rights reserved. · www.tertiarycourses.com.sg

- Projector/display for trainer demonstrations and learner reviews.
