Lab 2 — Information Flow and Principle Audit

Sample prompts and code · A2 · K1 · K3 · LO1

prompt.txt

```
Goal: complete user flow with exception states and a prioritised UI audit
Audience: Adults using a community wellness service, including users with varied digital confidence and
  accessibility needs.
Context: Map the wellness appointment task and inspect a flawed flow against clarity, hierarchy,
  consistency, accessibility and feedback.
Required content: Use realistic service names, appointment times, success, empty, loading, permission and
  error states.
Design system: Use the supplied tokens and component rules. Prefer clear labels, visible focus, 44px minimum
  targets and strong contrast.
Constraints: Mobile-first; no lorem ipsum; one dominant primary action per screen; preserve user input on
  recoverable errors.
Acceptance: Flow includes success and recovery; Every issue names a principle; Severity connects to task
  impact; Recommendations are testable
Output: Create the named design in Claude Design, save a version checkpoint and export or share the evidence
  requested in the README.
