Lab 4 — Prompted Wireframes and Variants

Sample prompts and code · A3 · K3 · LO2

prompt.txt

```
Goal: low-fidelity responsive wireframes and a documented variant decision
Audience: Adults using a community wellness service, including users with varied digital confidence and
  accessibility needs.
Context: Generate a four-screen wellness booking flow, then compare two structurally different directions.
Required content: Use realistic service names, appointment times, success, empty, loading, permission and
  error states.
Design system: Use the supplied tokens and component rules. Prefer clear labels, visible focus, 44px minimum
  targets and strong contrast.
Constraints: Mobile-first; no lorem ipsum; one dominant primary action per screen; preserve user input on
  recoverable errors.
Acceptance: All required screens appear; Real content replaces lorem ipsum; Variants differ structurally;
  Selection cites criteria
Output: Create the named design in Claude Design, save a version checkpoint and export or share the evidence
  requested in the README.
