Lab 5 — Reusable Components and States

Sample prompts and code · A3 · LO2

prompt.txt

```
Goal: component sheet and coded reference with default, focus, loading, disabled and error states
Audience: Adults using a community wellness service, including users with varied digital confidence and
  accessibility needs.
Context: Turn the selected wireframe into a component system with accessible buttons, fields, cards and
  navigation.
Required content: Use realistic service names, appointment times, success, empty, loading, permission and
  error states.
Design system: Use the supplied tokens and component rules. Prefer clear labels, visible focus, 44px minimum
  targets and strong contrast.
Constraints: Mobile-first; no lorem ipsum; one dominant primary action per screen; preserve user input on
  recoverable errors.
Acceptance: Components use tokens; Focus is visible; Loading/error states are distinct; Reuse does not
  create drift
Output: Create the named design in Claude Design, save a version checkpoint and export or share the evidence
  requested in the README.
