Lab 6 — Interactive Responsive Prototype

Sample prompts and code · A4 · LO3

prompt.txt

```
Goal: interactive prototype covering booking success, conflict and recovery
Audience: Adults using a community wellness service, including users with varied digital confidence and
  accessibility needs.
Context: Build and connect the high-fidelity wellness flow across desktop and mobile widths.
Required content: Use realistic service names, appointment times, success, empty, loading, permission and
  error states.
Design system: Use the supplied tokens and component rules. Prefer clear labels, visible focus, 44px minimum
  targets and strong contrast.
Constraints: Mobile-first; no lorem ipsum; one dominant primary action per screen; preserve user input on
  recoverable errors.
Acceptance: Primary task is complete; Conflict state preserves progress; Mobile layout adapts; All actions
  provide feedback
Output: Create the named design in Claude Design, save a version checkpoint and export or share the evidence
  requested in the README.

    time.'; service.focus();
});
```

prototype-test.md

```
# Prototype test

Task: Book a counselling appointment. If 2:30 PM is unavailable, recover and complete the booking.

Expected: Service selection remains, the conflict is explained, focus moves to time, and confirmation
  announces the result.
```
